Neil D. Jespersen is an active member of the Department of Chemistry at St. John's University (Queens, New York). He earned his B.S. degree with special attainments in chemistry at Washington and Lee University (Lexington, Virginia) and his Ph.D. at Pennsylvania State University (University Park, Pennsylvania). He specializes in analytical chemistry research and has mentored more than 100 undergraduate research students and 25 graduate students. Dr. Jespersen teaches graduate and undergraduate courses in instrumental analysis and quantitative chemical analysis. He also teaches general chemistry on a regular basis and coordinates the general chemistry laboratory program. Dr. Jespersen is a fellow of the American Chemical Society and currently serves as a councilor from the New York section. He is also the faculty advisor to the ACS Student Chapter at St. John's University. Pamela K. Kerrigan is an active member and director of the Division of Natural Sciences at the College of Mount Saint Vincent (Bronx, New York). She earned her B.A. at Lakeland College as a double major in biology and chemistry, her M.S. at the University of Wisconsin (Milwaukee), and her Ph.D. at Arizona State University in chemistry. Over the past 20 years, Dr. Kerrigan has mentored numerous undergraduate research students. She teaches undergraduate courses in general chemistry, organic chemistry, and biochemistry. Dr. Kerrigan is the past chair of the New York section of the American Chemical Society and is a councilor. During her tenure at the college, she has been the mentor for the American Chemical Society Student Chapter. She is a member of the Board of Directors of Sigma Xi representing the North East Region since 2012. For 10 years, Dr. Kerrigan was a reader for the AP Chemistry exam.

I bought this book as an extremely nervous and hectic junior who was scared for his own life coming into the AP chemistry exam. Now, after the fact (and having scored a 5), I would have to say this book is definitely overkill. Does it help you study and prepare thoroughly? Yes, but I think it goes

into unnecessary depth, and some subjects that were covered by the book weren't even on the exam! But honestly, it's always better to go in over-prepared, just in case the test makers decide to trip you up with an obscure topic. Overall, it's an okay book and worth a quick read-through, but I wouldn't spend too much time with it. 4/5 stars because it wasn't as effective and helpful as it could've been. I wouldn't skip over it completely either, because it definitely hits some key points that help you immensely during the test. For a gauge of how difficult the actual AP exam was, imagine somewhere between the difficulty of the example tests on collegeboard (easy) and the practice tests on this (very hard). But the actual test is definitely NOT as hard as the practice tests in this book, and there's no use to worry needlessly if you can't answer some (or quite a few) ridiculously hard questions and freak out about not being prepared (which is what I did).

Most of the questions are fine; some do not have the standard challenges of the new AP Chem exam questions. The Practice Test, however, is still a very good resource for my students. Big book but light in weight, but the paper seems to be off-white.

My daughter ordered this book to help her study for her AP exam, she felt it was helpful. She just took the exam last week.

Met expectations.

Really dense material. Good for learning throughout the year but horrible for cramming/last minute studying. Practice test questions are not like those found on the actual AP Exam (coming from first hand experience)

As expected

very Useful

This is a great book, and it was really helpful for my AP chem class, especially when I'm preparing for my AP exam.
