Marine Fisheries Ecology

Synopsis

This topical and exciting textbook describes fisheries exploitation, biology, conservation and management, and reflects many recent and important changes in fisheries science. These include growing concerns about the environmental impacts of fisheries, the role of ecological interactions in determining population dynamics, and the incorporation of uncertainty and precautionary principles into management advice. The book draws upon examples from tropical, temperate and polar environments, and provides readers with a broad understanding of the biological, economic and social aspects of fisheries ecology and the interplay between them. As well as covering 'classical' fisheries science, the book focuses on contemporary issues such as industrial fishing, poverty and conflict in fishing communities, marine reserves, the effects of fishing on coral reefs and by-catches of mammals, seabirds and reptiles. The book is primarily written for students of fisheries science and marine ecology, but should also appeal to practicing fisheries scientists and those interested in conservation and the impacts of humans on the marine environment. particularly useful are the modelling chapters which explain the difficult maths involved in a user-friendly manner describes fisheries exploitation, conservation and management in tropical, temperate and polar environments broad coverage of 'classical' fisheries science emphasis on new approaches to fisheries science and the ecosystem effects of fishing examples based on the latest research and drawn from authors' international experience comprehensively referenced throughout extensively illustrated with photographs and line drawings

Book Information

Paperback: 432 pages

Publisher: Blackwell Science; 1 edition (February 15, 2001)

Language: English

ISBN-10: 0632050985

ISBN-13: 978-0632050987

Product Dimensions: 7.5 x 0.8 x 9.7 inches

Shipping Weight: 2.2 pounds (View shipping rates and policies)

Average Customer Review: 5.0 out of 5 stars 2 customer reviews

Best Sellers Rank: #462,184 in Books (See Top 100 in Books) #61 in Books > Science & Math > Biological Sciences > Zoology > Ichthyology #70 in Books > Science & Math > Nature & Ecology > Natural Resources > Fisheries & Aquaculture #183 in Books > Science & Math > Biological Sciences > Biology > Marine Biology

Customer Reviews

"The book is indeed a boon to both the student and teaching communities." Pashudhan "...this book, better than any other single volume I know at present, covers topics that will be important in future ecosystem-based management of fisheries." Fish and Fisheries "Well-written and thoughtfully put together" Professor Terry Quinn (Alaska, Fairbanks) "This book will be widely read and cited" Professor Jeremy Collie (Rhode Island) "Marine Fisheries Ecology is a work of art that provides a broad, ecosystem-level understanding of the biological, economic, and social factors affecting and motivating diverse fisheries at global scales. This "must-read" is an extremely well-written and expertly organized treatise. It will have significant appeal for the established fisheries professional and the student and lecturer alike, including informed members of the public interested in marine ecology and production processes, patterns of fisheries exploitation, socioeconomics, and the complexities of aquatic resource politics and decisionmaking..." Carl V. Burger Past President, American Fisheries Society -and- Chair of the Executive Committee, 4th World Fisheries Congress, Vancouver, B.C. Canada

This topical and exciting textbook describes fisheries exploitation, biology, conservation and management, and reflects many recent and important changes in fisheries science. These include growing concerns about the environmental impacts of fisheries, the role of ecological interactions in determining population dynamics, and the incorporation of uncertainty and precautionary principles into management advice. The book draws upon examples from tropical, temperate and polar environments, and provides readers with a broad understanding of the biological, economic and social aspects of fisheries ecology and the interplay between them. As well as covering 'classical' fisheries science, the book focuses on contemporary issues such as industrial fishing, poverty and conflict in fishing communities, marine reserves, the effects of fishing on coral reefs and by-catches of mammals, seabirds and reptiles. The book is primarily written for students of fisheries science and marine ecology, but should also appeal to practising fisheries scientists and those interested in conservation and the impacts of humans on the marine environment.

This is an ideal text book for any student studying fisheries (or for a lecturer looking for a framework upon which to base a 12 week course). It is very well written and structured. There is also the added bonus that you can access the graphics used in the book on line. There are more comprehensive texts than this but they exorbitantly priced and beyond the pocket of most students (and academics!) In my opinion this replaces Pitcher and Hart which was the standard text when I was an

undergraduate.

Excellent book- written by a team of well-known marine ecologist. Any grad students in marine science should have one.
