Plant Stems & Roots (Look Once, Look Again Science Series)

Synopsis

Just try to keep these books on the shelves! Children can't resist "diving" into these brightly colored books to explore their favorite topics. Young scientists will examine plant parts and animal features "up close" and then turn the page to see how these smaller parts fit into the "bigger picture." Children will take a close-up view of the powerful ears of a bat, the thorny stem of a blackberry bush, the sticky tongue of a fly, and more. Also perfect for five-senses study, this 24-book series of books features outstanding photographs by renowned nature photographer Dwight Kuhn and easy-to-read text by award-winning children's author David M. Schwartz.

Age Range: 4 - 8 years

Grade Level: 1 - 3

Customer Reviews

Great book!!

Super cute book, we used this to teach a class about growing and maintaining a garden. For children ages 3-7.

This book is a perfect resource to add to our study of Tops and Bottoms. Thank you!

An awesome book with real photos to teach about roots and stems.

Great book for young children learning about gardening. Nice pictures and wasn't too long for a student to lose interest in the story.

I bought these books for my 6 yr. old grandson. He loves books and especially likes his Papa to sit in his big wing chair in the library and read them to him. We all find them very charming and wonderfully entertaining and informative. A wonderful addition to my personal library.

Excellent book, very colorful and easy for young children to understand. The pictures are real and students will have a reference point when studying the parts of plants. Great.
