Jim Brennan is a certified Kâ€“12 mathematics teacher who has been teaching for more than ten years. He is the creator of MathHW.net, a math homework site where he provides Common Core resources for students, teachers, and parents, along with tutorial videos, interactive practice problems, and math games. He lives in Watertown, MA.

Delighted with this book. Daughter in law using it to tutor her daughter.

Make it easy to read and use! Being able to go to the grade of the child and go through it with them.

Was helpful for me. I was able to help the grandchildren a little bit.

Helpful; written in understandable language.

Very helpfulbook.

Very good book. I really wanted something that can help me understand common core considering this was not taught in my days in school and now my kiddos are forced to learn this. I need to be able to help them when they need help, which is quite often. The teacher seems to not want to take the time to MAKE sure the kids understand, and believe me I have heard so many parents as well as teachers say that kids struggle with this method, so it falls to me apparently and all parents to help them understand. This book has helped me out quite a bit and with example problems makes it all the better.

This was edge of your seat reading. The numbers and concepts flew off the pages. If you like 50 Shades of Gray you will love this book. Intense drama, daring action and breath taking descriptions. Please people, it's a freaking math book. If you need to understand (and who doesn't) the Common Core this is the only book you will need to read, until it's not because Common Core has been replaced with some other new-fangled math concept. But don't worry, I am sure master mathematician Jim Brennan will write a book about that, too.

Seems to be common sense content, specials of common core are not clear. Exhaustive to read
