# Conquering Lyme Disease: Science Bridges The Great Divide

## Synopsis

With more than 300,000 cases diagnosed each year, Lyme disease is the most common tick-borne illness in the United States. However, doctors are deeply divided on how to diagnose and treat it, leading to the controversy known as the “Lyme Wars.” Firmly entrenched camps have emerged, causing physicians, patient communities, and insurance companies to be pitted against one another in a struggle to define Lyme disease and its clinical challenges. Health-care providers may not be aware of Lyme’s diverse manifestations or the limitations of diagnostic tests. Meanwhile, patients have, on the one hand, felt dismissed by their doctors and, on the other hand, frightened and confused by the conflicting opinions and dubious self-help information found online. In this authoritative book, the Columbia University Medical Center physicians Brian Fallon and Jennifer Sotsky explain that there is much cause for optimism. The past decade’s advances in precision medicine and biotechnology are reshaping our understanding of Lyme disease and accelerating the discovery of new tools to diagnose and treat it, such that the great divide previously separating medical communities is now being bridged. Drawing on both extensive clinical experience and cutting-edge research, Fallon, Sotsky, and their colleagues present these paradigm-shifting breakthroughs. They clearly explain the immunologic, infectious, and neurologic basis of chronic symptoms and their cognitive and psychological impact, as well as current and emerging diagnostic tests, treatments, and prevention strategies. Written for the educated individual seeking to learn more, *Conquering Lyme Disease* gives an up-to-the-minute overview of the science that is essential for both patients and practitioners. It argues forcefully that the expanding plague of Lyme and other tick-borne diseases can be confronted successfully and may soon even be reversed.

## Book Information

Hardcover: 384 pages

Publisher: Columbia University Press (December 12, 2017)

Language: English

ISBN-10: 0231183844

ISBN-13: 978-0231183840

Product Dimensions: 34.3 x 0.6 x 31.7 inches

Shipping Weight: 1.5 pounds (View shipping rates and policies)

## Customer Reviews

Lyme disease is a more complicated and nuanced illness than has been previously recognized. Fallon and Sotsky's experience with the neuropsychological manifestations of Lyme, combined with their insights into the current patient experience, make this book a significant addition to the literature. A well-organized, comprehensive treatment of Lyme disease and the associated issues that patients face. (John Aucott, Johns Hopkins University School of Medicine, Lyme Disease Research Center)

Brian A. Fallon, MD, is director of the Lyme and Tick-Borne Diseases Research Center at the Columbia University Medical Center. Jennifer Sotsky, MD, is a physician with a specialty in narrative medicine. She is a resident at Columbia University Medical Center.
