Customer Reviews

An outstanding short book on brain cancer that covers causes, symptoms, stages, treatments, coping and more. The symptoms were most informative to me. Headache, seizures, sensory changes, memory and personality changes. Also, fatigue and vomiting which make sense to me, also. The portion on coping is excellent, I thought. One step at a time and setting personal goals for yourself are both so important. Excellent advice for anyone but particularly one that has been diagnosed with cancer. Most highly recommended.

A tough subject is written in plain words for average reader. It is a good beginning but you really need to read many more books or articles to get a picture of brain cancer. I would suggest a book on hospice as well.

Learning quite a bit and it is helping to make me feel and understand things better.

Great book to start with. Easy for me to understand, but wished it would have given more info on treatment.

Thank you for the information
